

MOSES LAKE'S 10 MOST WANTED: CLEAN WATER ENEMIES

1. BACTERIA
2. NUTRIENTS
3. HEAVY METALS
4. pH AND TEMPERATURE
5. TRASH AND SOLIDS
6. DETERGENTS
7. OIL AND GREASE
8. SEWAGE
9. AUTOMOTIVE FLUIDS
10. CHEMICALS

Did you know that one third of Washington's waters are too polluted to meet state water quality standards? Think it comes from big factories, or heavy industry? You'd be wrong!

More than 60% of water pollution comes from our day to day use: cars leaking oil, fertilizer and yard chemical use, pet waste runoff, and detergents from washing cars. All of these small everyday sources lead to a BIG pollution problem.

YOU can be the solution to pollution! When it comes to chemicals, reduce your use. Keep your car in good shape. And keep pollutants out of our storm drains. Make sure the green we see isn't in the lake.
